

SESSION 4: THINKING FROM THE INSIDE OUT

Panel 1 at 3:00 p.m. is on the following: Designing Merit

Presenter: Greg Huang
Vice President
CCR Airports

BIO: Gregory Huang is in charge of business development for CCR airports in North America. His airport development and management career spans over 13 years. He has served as the CFO for Total Airport Services, an aviation services company that has more than 1500 employees and operates in eight different airports in the U.S. Prior to CCR Airports, he served as vice president at Airports Worldwide, where he was responsible for the company's strategic initiatives and project financing activities.

PRESENTATION: Sustainability and Equity Case for a Vertically Integrated Air Cargo Facility at LAX

More than ever before, the U.S. is relying on air cargo to meet the demand for high-value and time-sensitive goods as well as the growing consumer dependence on e-commerce. Despite this demand, the industry has been historically slow to innovate and address organic growth. Most airports have insufficient capital reserves for investment to improve or replace outdated cargo infrastructure and make technological advancements. This presentation will explore partnership structures between the public and private sector and will explain how to improve negative situations.
