

BUILDING BETTER INFRASTRUCTURE OUTCOMES TOGETHER

Infrastructure decisions shape communities for generations.

Infrastructure decisions shape communities for generations. The way projects are planned, designed, delivered, and operated influences economic prosperity, environmental stewardship, resilience, and quality of life.

As infrastructure challenges continue to evolve, organizations need practical tools, shared knowledge, and opportunities to learn from one another. Sustainable, resilient, and equitable infrastructure is not achieved by any one organization alone. It requires collaboration among public agencies, private-sector firms, academic institutions, and industry leaders working toward common goals. ISI membership supports these needs through professional learning, preferred pricing, organizational recognition, and engagement with the Envision community.

The Institute for Sustainable Infrastructure (ISI) is a nonprofit education and research organization dedicated to advancing sustainable infrastructure through education, credentialing, project verification, research, and industry engagement.

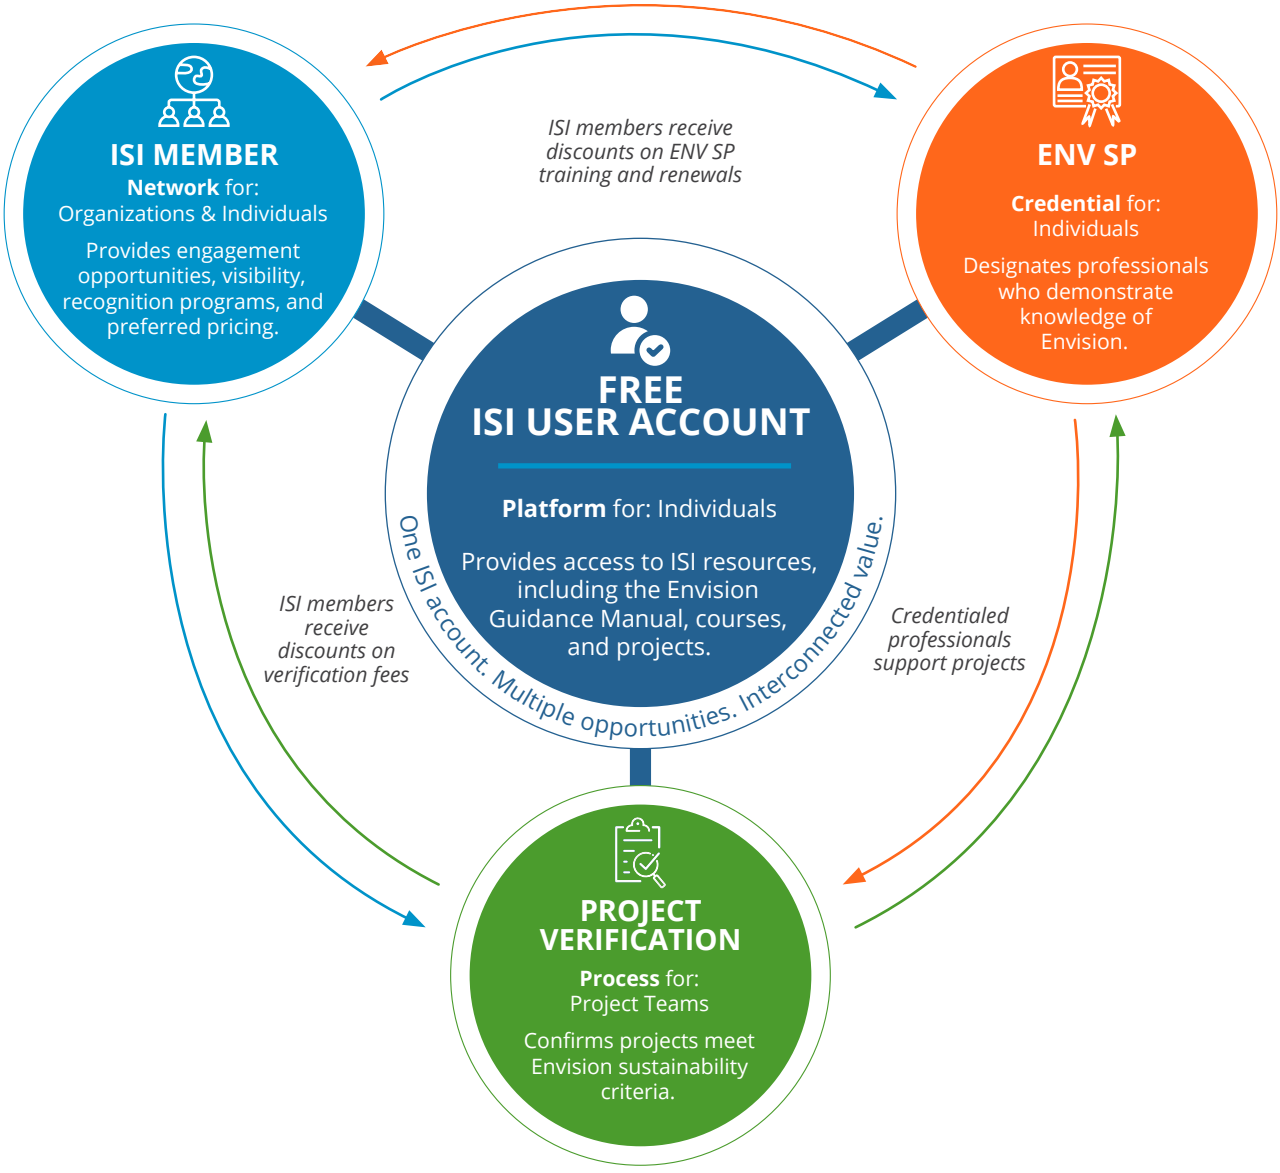

As the organization behind the Envision® Sustainable Infrastructure Framework, ISI helps infrastructure professionals and organizations improve decision-making, strengthen project performance, and deliver greater long-term value for communities.

Sustainable infrastructure creates value that extends beyond the asset itself, supporting communities, strengthening resilience, and improving long-term performance.

ISI membership connects organizations and professionals to a global community committed to improving infrastructure outcomes. Through membership, organizations can strengthen internal capacity, support professional development, apply Envision principles in practice, engage with industry peers, and demonstrate leadership in sustainable infrastructure.

Whether you are a consulting firm, contractor, manufacturer, public agency, university, or individual practitioner, membership provides pathways to build knowledge, foster collaboration, and contribute to a more sustainable infrastructure future.

Join a global community of organizations, agencies, academic institutions, and professionals advancing sustainable, resilient, and equitable infrastructure.

Becoming an ISI Member and becoming an Envision Sustainability Professional (ENV SP) are not the same.

ISI membership provides organizations and individuals with engagement opportunities, recognition programs, and preferred pricing on other offerings (including ENV SP training).

The ENV SP credential is a professional designation for individuals to demonstrate knowledge of the Envision Sustainable Infrastructure Framework. Click here to learn more about the ENV SP credential.

The Value of Membership

Membership That Supports Better Infrastructure Outcomes

The infrastructure challenges facing today's communities are complex and interconnected. Addressing them requires organizations that are equipped to think beyond individual projects, collaborate across disciplines, and continuously strengthen their knowledge and capabilities.

ISI membership is more than access to resources or preferred pricing. It is an opportunity to join a community of organizations, agencies, academic institutions, and professionals committed to advancing sustainable, resilient, and equitable infrastructure. Membership provides pathways to develop expertise, apply leading practices, share knowledge, and demonstrate leadership within the infrastructure sector.

Through membership, organizations can strengthen their ability to deliver long-term value, support workforce development, and contribute to better outcomes for projects, communities, and the environment. ISI helps members translate sustainability principles into practical action through education, credentialing, industry engagement, and the Envision framework.

Membership Supports Four Key Outcomes

1

BUILD KNOWLEDGE

Develop the knowledge and skills needed to address evolving infrastructure challenges. Members gain access to learning opportunities, professional development resources, and pathways to Envision Sustainability Professional (ENV SP) credentialing that help strengthen individual and organizational capacity.

2

APPLY SUSTAINABLE INFRASTRUCTURE PRACTICES

Move from awareness to implementation. Membership supports organizations seeking to incorporate sustainability, resilience, and long-term performance considerations into projects, planning processes, policies, and operations through the use of Envision and related resources.

3

CONNECT AND CONTRIBUTE

Learn from peers across the infrastructure community. Members participate in a network of practitioners, public agencies, academics, and industry leaders who share lessons learned, exchange ideas, and contribute practical experience that advances the profession.

4

DEMONSTRATE LEADERSHIP

Show stakeholders, clients, partners, and communities a commitment to sustainable infrastructure and continuous improvement. Membership helps organizations make their efforts and accomplishments more visible while aligning with a growing movement focused on delivering long-term value and community benefit. Eligible companies and public agencies may qualify for Envision Qualified Company (EQC) or Envision Supported Agency (EQA) recognition.

A Community Working Toward a Common Purpose

Whether serving as infrastructure owners, planners, designers, contractors, operators, educators, researchers, or suppliers, ISI members share a common goal: improving the performance and impact of infrastructure investments. Membership provides opportunities to learn, collaborate, and lead while helping organizations prepare for the challenges and opportunities that lie ahead. Members contribute to and benefit from ISI research initiatives, industry insights, and knowledge-sharing efforts that advance sustainable infrastructure practice. Start with your organization's priorities. Identify upcoming credentialing and maintenance needs, connect eligible employees to your account, and review applicable recognition and Supplier Directory opportunities.

MEMBERSHIP OPTIONS

Membership Pathways for Every Part of the Infrastructure Community

Private Company Membership

For Private-Sector Organizations Supporting Infrastructure

Private Company Membership is designed for engineering firms, consulting companies, architects, planners, contractors, manufacturers, suppliers, professional associations, and other organizations engaged in infrastructure development and delivery.

Members use ISI resources and the Envision framework to strengthen internal expertise, support workforce development, and help teams deliver greater value to clients and communities. Organizational membership allows eligible employees to connect to one company account and receive applicable member benefits. Preferred pricing supports staff credentialing and maintenance, project verification, and Supplier Directory participation, while learning and recognition opportunities support the company's broader sustainability goals.

Private-sector organizations that use Envision and employ at least one Envision Sustainability Professional (ENV SP) within their workforce qualify for recognition as an Envision Qualified Company.

Public Agency Membership

Public Agency Membership supports federal, state, provincial, regional, and local government agencies, utilities, authorities, and other public-sector organizations responsible for planning, delivering, and managing infrastructure.

Public agencies face increasing expectations to deliver resilient infrastructure, demonstrate accountability, and maximize long-term value from public investments. Membership helps agencies build organizational knowledge, establish a shared approach to infrastructure sustainability, and support consistent decision-making across departments and project teams.

Membership helps agencies develop staff knowledge and support a shared approach to sustainable infrastructure across departments and project teams. Eligible employees can connect to the agency account and receive applicable member benefits.

Organizations that actively integrate Envision and meet program requirements may qualify for recognition as an Envision Supported Agency, highlighting their commitment to sustainable infrastructure leadership.

Academic Membership

Preparing the Next Generation of Infrastructure Leaders

Academic Membership supports universities, colleges, and educational programs that are preparing students to address the infrastructure challenges of tomorrow. Through membership, institutions can connect education with real-world practice while introducing students to leading approaches in sustainable infrastructure.

Faculty and students can incorporate Envision into teaching, research, capstone projects, applied learning experiences, and interdisciplinary initiatives. Academic Membership helps create pathways between the classroom and professional practice while supporting career readiness for future infrastructure professionals.

Individual Membership

Stay Connected to the Infrastructure Sustainability Community

Individual Membership is available for professionals who want to engage with ISI and the Envision community but are not affiliated with an active Organizational, Public Agency, or Academic Membership account.

Whether advancing your own professional development, exploring Envision, or staying connected to emerging conversations in infrastructure sustainability, Individual Membership provides opportunities to remain engaged with the broader ISI community. Individual Membership and the ENV SP credential are separate; joining ISI does not confer the credential.

HOW MEMBERS ENGAGE WITH ISI

Which Membership Pathway is Right for You?

Every membership type supports the same overarching goal: helping organizations and professionals improve infrastructure outcomes through knowledge, collaboration, and continuous improvement. The right pathway depends on your role within the infrastructure community, but each offers opportunities to learn, contribute, and demonstrate leadership in advancing sustainable, resilient, and equitable infrastructure.

Private Company Membership

Designed for engineering firms, consulting companies, architects, planners, contractors, manufacturers, suppliers, professional associations, and other organizations engaged in infrastructure development and delivery.

Annual fee:
≤50 employees – $500
51-100 emp – $1,500
101-500 emp – $2,500
>500 emp – $3,500

Membership applies to the organization and allows eligible employees to connect to the organizational account.

Recognition that Reflects Commitment

Organizations that actively engage with Envision and support ENV SP participation may qualify for recognition programs such as:

- **Envision Qualified Companies (EQC)**
- **Envision Supported Agencies (ESA)**

These programs recognize organizational commitment to Envision and require at least one active ENV SP on staff.

THE ENVISION SUPPLIER DIRECTORY

Connecting sustainability solutions to infrastructure project teams

Institute for Sustainable Infrastructure

ENVISION

Envision Supplier Directory

Infrastructure owners, design teams, contractors, and other decision-makers are increasingly seeking materials, products, services, and technologies that support their sustainability goals. The Envision Supplier Directory helps project teams identify solutions that align with the Envision framework and support sustainable infrastructure outcomes.

The directory serves as both a resource for project teams looking to address specific sustainability challenges and an opportunity for suppliers to highlight materials and services that support sustainable infrastructure. By connecting solutions to concepts within the Envision framework, participating organizations gain visibility within a community that is increasingly using Envision to guide project planning, design, construction, and operations.

Eligible membership levels include directory listings, and additional listing opportunities are available. Organizations may also participate in the Supplier Directory without becoming ISI members.

For listing requirements, eligibility details, and current pricing,
visit the Supplier Directory online.

Inclusion in the Envision Supplier Directory does not constitute certification, endorsement, or approval by ISI. Using suppliers listed in the directory is not required for Envision project verification.

MEMBER IMPACT

What Members are Achieving

Building Knowledge

Members use ISI learning opportunities to strengthen their knowledge and support their organizations' sustainability priorities.

> *The educational opportunities provided by ISI really help to bring sustainability to the forefront and support sustainability goals when planning and designing infrastructure projects. Sustainability is a very dynamic field… It's really key to continue learning about sustainable practices in order to incorporate sustainability as a critical element of project development.*

TERA HARAMOTO
LA County Public Works

Connecting & Contributing

Sustainable infrastructure requires collaboration across departments, disciplines, and organizations. Members gain opportunities to learn from peers and contribute to industry advancement.

> *The Envision sustainability framework has served as a common language for our project teams to communicate throughout the capital project life cycle, connecting our project teams in the discussion and incorporation of sustainability best practices and industry standards.*

SCOTT GALLIC
Port of Long Beach

Developing Future Leaders

Academic institutions, public agencies, and private-sector organizations alike are helping prepare the next generation of infrastructure professionals. Members support learning opportunities that connect education, research, and professional practice while fostering the knowledge and leadership needed to address future infrastructure challenges.

> *I use Envision in the classroom because from my perspective, sustainability rating systems like Envision are the most likely way that our civil engineering students will interact with sustainability in their careers in industry. To provide training on this for students, I sought out my own ENV SP credential to learn more about Envision and integrate it into the classroom.*

DIANA BYRNE
University of Kentucky

MEMBER IMPACT

What Members are Achieving

Demonstrating Leadership

Membership helps organizations establish and communicate their commitment to sustainable, resilient, and equitable infrastructure.

> *The Port Authority adopted the Envision framework as the foundation of our Sustainable Infrastructure Guidelines, helping us establish a consistent approach to sustainable infrastructure across our organization.*

RESILIENT AND SUSTAINABLE ENGINEERING
Port Authority of New York and New Jersey (PANYN)

Applying Sustainable Infrastructure Practices

Members apply sustainability and resilience principles throughout planning, design, construction, and operations to help projects deliver greater long-term value. By incorporating a more comprehensive view of environmental, social, economic, and resilience considerations, organizations are supporting infrastructure investments that perform better over time and create broader community benefits.

> *Envision provides a framework that helps teams align goals, improve coordination, and integrate sustainability considerations from the beginning of project development.*

AKIMA CORNELL
Akima Consulting, LLC

Strengthening Collaboration

Infrastructure challenges rarely fit within a single discipline or organization. Members use ISI's network and resources to engage with peers, share lessons learned, and explore new approaches to addressing common challenges. Through conferences, webinars, research initiatives, and knowledge-sharing opportunities, members contribute to a broader community dedicated to continuous improvement.

> *The Envision framework helps foster critical thinking about how to balance environmental stewardship with social impact and economic growth, preparing students to be more responsible and innovative future leaders in sustainable infrastructure development. It also fosters collaboration amongst different disciplines in the construction industry.*

PRABH K. BANGA
Aecon Group, Inc.

Recognizing Our Chartered Members

ISI gratefully recognizes its Chartered Members, the organizations whose early leadership, vision, and commitment helped establish and advance both ISI and the Envision framework.

Their support helped build a foundation for a growing global community committed to improving infrastructure outcomes through sustainability, resilience, and collaboration. Today, Chartered Members remain an important part of ISI's history and continued impact across the infrastructure profession.

Chartered Members continue to play an important role in advancing sustainable infrastructure through industry leadership, collaboration, and ongoing engagement with ISI's mission.

Learn more about ISI's Chartered Members and their lasting contributions to sustainable infrastructure.

A Diverse Community with a Shared Vision

ISI members represent a diverse community of public agencies, consulting firms, contractors, manufacturers, academic institutions, utilities, and individual professionals. What connects them is a shared belief that infrastructure can and should deliver value beyond the asset itself, creating stronger communities, healthier environments, and more resilient systems for future generations. Through membership, organizations gain opportunities to learn, contribute, and help shape the future of infrastructure sustainability.

JOIN THE COMMUNITY

Advance Sustainable Infrastructure with ISI

Whether you are a private-sector organization, public agency, academic institution, or individual practitioner, ISI membership provides opportunities to build knowledge, strengthen capacity, and contribute to better infrastructure outcomes.
